Date of birth: July 8th, 1987

[Edited: August 27, 2018]

Career summary

For about 10 years my focus has been on computational science, and in particular on computational physics. Over these years I have built up expertise on numerical methods, (parallel) computer programming, plasma physics, devising approximations, data analysis and data visualization. During my PhD (CWI, Amsterdam) I developed novel models for electric discharges. What attracted me to this topic is that most of the computational methods can be applied to many other phenomena. As a postdoc I moved to the Centre for Mathematical Plasma Astrophysics (KU Leuven) to gain more expertise on computational (magneto-)hydrodynamics and high-performance computing, while also continuing research on electric discharges. In October 2018 I will start a tenure-track position at CWI, Amsterdam.

Academic experience

2018–present **Tenure tracker**, *Centrum Wiskunde & Informatica (CWI)*.
In October 2018 I will start a five-year tenure-track position in the Multiscale Dynamics group at CWI. During the first year, the position will be combined with a 25% appointment at KU Leuven.

2016–present **Postdoc**, *Centre for mathematical Plasma Astrophysics, KU Leuven*.
Received a three-year FWO Postdoctoral Fellowship to improve our understanding of sprites (discharges high up in the atmosphere). One of the goals is to develop a highly efficient parallel elliptic solver, which will not only enable realistic 3D simulations of sprites but also extend the applicability of the group's magneto-hydrodynamics code.

2015–2016 **Postdoc**, *Centrum Wiskunde & Informatica (CWI)*.
Stayed for four months as a postdoc to write proposals, finish papers and transfer knowledge.

2011–2015 **PhD**, *CWI & Eindhoven University of Technology*.
Title: "3D Simulations and Analysis of Pulsed Discharges" *(cum laude)*, supervisor: Ute Ebert.
I developed Monte Carlo particle simulations as well as continuum models for electric discharges, and worked on the link between them. I also developed a parallel simulation framework that combined adaptive mesh refinement with geometric multigrid.

Education

2009–2011 **Master**, *University of Amsterdam*.
Computational Science *(cum laude)*

2005–2008 **Bachelor**, *University of Amsterdam*.
Physics & Astronomy *(cum laude)*

1999–2005 **Secondary education**, *Barlaeus Gymnasium, Amsterdam*.
Track: Nature & Technology

Honors & Awards

2015 Student Award of Excellence at the joint meeting of 68th Gaseous Electronics Conference (GEC), 9th Int. Conf. on Reactive Plasmas (ICRP), and 33th Symposium on Plasma Processing, Honolulu, Hawaii, USA.

Grants

2018 **'Opening Project'**, *State Key Laboratory of Electrical Insulation and Power Equipment (SKLEIPE), Xi'an Jiaotong University, China*.
Two-year grant to collaborate with A. Sun on "Revealing how dielectrics affect electric discharges through numerical simulations"

2016 **Postdoctoral Fellowship**, *Research Foundation – Flanders (FWO)*.
Received a 3-year FWO postdoctoral fellowship to work on "Understanding the formation and 3D structure of sprite discharges"

Teaching

2016–2017 **Teaching assistant**, *KU Leuven*.
Computational methods for Astrophysical applications (Master)
Calculus & Analysis (Bachelor)
Bachelor projects in mathematics

2008–2009 **Student assistant**, *University of Amsterdam*.
Physics Lab Courses 1 & 2 (Bachelor)

Administrative experience

2017–present **Seminar organization**, *Centre for mathematical Plasma Astrophysics*.

2016–present **Works council member**, *Department of Mathematics, KU Leuven*.

2015–2016 **Works council member**, *Centrum Wiskunde & Informatica*.

Selection of simulation software

Octree-mg (author) An MPI-parallel geometric multigrid solver that can be coupled to adaptive mesh refinement frameworks to solve elliptic equations.
URL: `https://github.com/jannisteunissen/octree-mg`.

MPI-AMRVAC (developer) In order to later implement an efficient parallel elliptic solver into this (magneto-)hydrodynamics framework, I have first modernized and modularized the code and introduced automatic tests.
URL: `https://github.com/amrvac/amrvac`.

Afivo (author) Generic simulation framework with quadtree/octree adaptive mesh refinement, shared-memory parallelization and built-in geometric multigrid routines.
URL: `https://gitlab.com/MD-CWI-NL/afivo`.

Afivo-streamer (author) Simulation models for streamer discharges in 2D, 3D and cylindrical coordinates, based on Afivo. Includes a Monte Carlo method for photoionization.
URL: `https://gitlab.com/MD-CWI-NL/afivo-streamer`.

Particle swarm (author) A Monte Carlo tool to simulate electron swarms in arbitrary electric and magnetic fields, and record their transport properties. Such a Boltzmann solver provides the link between fluid and particle models.
URL: `https://gitlab.com/MD-CWI-NL/particle_swarm`.

Pamdi3D (author) A 3D particle-in-cell code for (streamer) discharge simulations, as described in [8]. URL: `https://github.com/jannisteunissen/pamdi3d`

Invited conference talks

2018 *Investigating how streamers interact with dielectrics with 1D PIC & fluid simulations*, 2018 Asia-Pacific Conference on Plasma and Terahertz Science, Xi'an, China

2017 *Modeling streamer discharges in strong magnetic fields: from particle to fluid*, 70th Gaseous Electronics Conference, Pittsburgh (PA), United States

2017 *Modeling streamer discharges in strong magnetic fields*, DPG Spring Meeting, Bremen, Germany

2016 *Simulating fast pulsed discharges: The basics, the present and the future*, 19th Workshop on the Exploration of Low-Temperature Plasma Physics (EU-regional workshop), Kerkrade, The Netherlands

2015 *3D Models for nanosecond pulsed discharges: with new codes to quantitative understanding*, XXXII International Conference on Phenomena In Ionized Gases (ICPIG), Iași, Romania

2015 *Streamer simulations in 3D with adaptive grids*, Meeting of ESF network TEA-IS, Vienna, Austria
